SUBJECT INDEX TO VOLUME 14

An outward-looking differential equation formulation for scattering from one-dimensional periodic diffraction gratings, 227
Analysis of resistively loaded, printed spiral antennas, 363
Analysis and design of conductor-backed square Archimedean spiral antennas, 305
Analysis of probe-fed circular microstrip patches backed by circular cavities, 239
Approximate calculation of transmission line parameters and field distributions of coplanar electrodes in the presence of a buffer layer, 119

Design of multi-arm multi-mode spiral antennas for directional beams using equivalent array concept, 285

Effective permittivity and permeability of a fibers grating, 137
Electromagnetic scattering from microstrip patch antennas and spirals residing in a cavity, 63

Graphical method in studying lossy transmission lines and layered absorber, 217

Integral equations for the induced EM fields in finite heterogeneous bodies with arbitrary electric and magnetic parameters, 153

Monofilar Archimedean spiral slot antennas, 415

Planar and other wide-angle logarithmic spirals over ground, 329
Polarization properties of spiral antennas: a tutorial, 259

Radar cross section computation of microstrip patches, 19
Radiation and scattering of a square Archimedean spiral antenna using FDTD, 87
RCS computation of coax-loaded microstrip patch antennas or arbitrary shape, 33
Resonant frequencies in an electromagnetic cylindrical/spherical cavity with an internal off-axis small dielectric sphere, 195

Scattering from microstrip patch antennas using subdomain basis functions, 1
Second-mode operation of an Archimedean spiral antenna backed by a conducting plane reflector, 319

Theoretical and experimental determination of the polarimetric antenna radar cross section, 99
Time domain scattering from dielectric bodies, 181
Two-arm slot spiral antenna, 397
